October 24th is World Polio Day: That's why we want to draw attention to the poliovirus. Let us take action to create lasting change and raise awareness that polio is a vaccine-preventable disease which can prevent death through polio.

Nevertheless, many children under 5 years are still endangered to get infected, which can cause poliomyelitis. Mostly spread through contaminated water, the virus is still a big problem in Nigeria, Pakistan, and Afghanistan.
Since 1985, Rotary International has led the charge against polio, helping to immunize more than 2.5 billion children in 122 countries and reducing polio cases by 99.9 percent. But the virus still exists and endangers people worldwide.
